

PARMAX[®]

YOUR WOODEN DOORS

PIVOT PARMAX LINE

PARMAX — PIVOT COLLECTION

Discover the unique collection of pivot-hinged entrance doors.

Parmax designs perfectly reflect the soul of the company. **We combine traditional elegance with elements of contemporary design.** Modern forms carved in natural noble wood create an amazing effect that can be described as innovative classics. Perfectly integrated accessories, retractable hinges, hand-made, precise door finishing - here every movement, the smallest gesture or step is well thought out.

We redefine lightness and perfection.

The Parmax collection with PIVOT hinged doors redefines lightness and perfection. **Impeccable lines, highlighted beauty of oak wood and executions that will emphasize the character of any building.** Doors mounted with PIVOT hinges are a solution that does not require the installation of any structural elements on the wall with an opening. This gives us the impression that the **door leading to the very heart of the house forms a perfect sheet of wall** suspended in a vacuum. This metal hardware mounted inside the leaf exceeds many of the limitations previously present in the design of home showcases. By using an offset hinge, the center of gravity is shifted. The distribution of forces changes so that we are able to conjure up a leaf weighing up to 500 kg, and the sheer lightness of opening and closing the door is unaffected.

Freedom of design

The Pivot Parmax Line opens the door to incredible design freedom for the showcase of many buildings. The installation, which does not require the use of additional structural elements in the wall, is one of the most popular solutions in recent years and finds its way perfectly into many types of interiors. Parmax's completed door designs are hosted in residential homes, offices and commercial buildings. **We take an individual approach to each project, with the vision and expectations of our clients at the core.** PIVOT hinged doors offer a full range of possibilities. Based on this innovative and highly aesthetic solution, we can create doors made of unique planks with beautiful rings, with a pane of glass in the main role, striking slats, with original quartz sinter, or even cast metal.

We create doors according to individual designs or based on catalog models.

PIVOT X-FACTOR

The heart of the **PIVOT X-FACTOR** collection is wood. A raw material that guarantees a timeless design regardless of the model chosen. The line offers **exterior doors made of solid oak, which can be complemented with impressive glazed side panels.** A unique variant of this collection are **doors made of old wood, which are restored with special care and attention to perfection.** Trust the classics, which, in addition to incredible aesthetic qualities, also provide high resistance to adverse external factors. Doors from the PIVOT X-FACTOR collection look impeccable regardless of the season and current weather conditions. **The unique structure of the wood, characterized by unique ring patterns and color, is the undeniable essence of originality.** Specialized in the carpenter's craft, we know how to highlight the beauty of wood with natural methods and make sure that the aesthetic does not fade over the years. Choose a wooden door from the PIVOT X-FACTOR collection, which will emphasize the soul of the house, and with its elegance will already outline the character prevailing in the interior.

oak wood

X-1

The oil-coated board is paired with a varnished frame and black antisol sun protection glazing. This model is complemented by stylish accessories in the form of a rose window and an oblong handrail in a timeless gold finish. A fingerprint reader, with an accessory-colored frame, tops off the overall effect.

X-2

According to the history inscribed on the structure of old wood, we coat it with oil and restore it to its former luster. A powder-coated aluminum sheet ensures the uniqueness of the finish. A side panel and a smart door opening system in the form of a face scanner have also earned their due place.

X-3

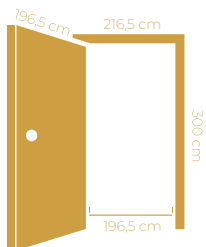

We protect the brushed oak by coating it with the highest quality oils. By combining the beauty of oak with a glazed side panel and unusually stylish accessories, we create a model wrapped in modernity and timeless style.

PIVOT SPIEK

The **PIVOT SPIEK** collection will appeal to any lover of unconventional applications. **We break traditional designs and redefine art.** We combine wooden frames with natural minerals that take the form of quartz sinter. Doors from this line are characterized by raw beauty, catching the eye of all fans of designer solutions and original combinations. By implementing designs based on quartz sinter, we reflect our perception of durability with a full handful of elegance. Sinter-covered leaves perfectly withstand changing weather conditions and, regardless of the passage of years, they look unique. **Importantly, thanks to a special hinge system, quartz sintered doors open smoothly and effortlessly, ensuring comfortable use and regardless of weight.** SPIEK collection offers models in a minimalist edition, as well as those enriched with glazed side panels in various eye-catching configurations. An undeniable advantage is the availability of many color variants. The wide selection means that everyone, irrespective of their preferences, will find a door for themselves.

oak wood

S-1

We coat **the oak wood** with quartz sinter and clad it right next to the GLASS side panels. The elegance of classic black will lend character to the building, and a frame varnished in the same shade will make the entire thing a perfect match.

S-2

The uniqueness of the front door lies in the executions based on quartz sintering. In the implemented projects we focus on innovative solutions. Fingerprint readers add color to everyday life with incredible convenience.

S-3

Door model from the **GLASS collection** in an arrangement with quartz sinter. A convenient opening system that puts a definitive end to stories of lost keys. The dot over the i is put in this edition by a black frame.

S-4

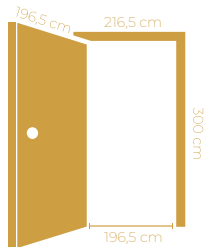

Quartz sinter is our innovative approach to modern design. The gold color on the handrail illuminated by LED technology blends beautifully with the rawness of the sinter. We surround the whole thing with a vertical GLASS side panel and a convenient fingerprint reader with a frame in the iconic black.

PIVOT LAMELLO

The **PIVOT LAMELLO** collection flawlessly fits into the dimensions of modern style. Doors from this line are also a nod to those who focus on minimalism and balanced simplicity. They are perfectly suited to original construction oriented towards consistency with nature and maximum comfort of use. **Wings with a three-dimensional surface are created thanks to the use of slats of the highest quality oak wood.** Depending on the type of project and the client's expectations, we are able to deliver a showcase of their house using **vertical or horizontal slats.** This type of wooden finish has won the hearts of many with a bang and, consequently, also the woodworking industry. **PIVOT hinges are capable of supporting heavy door leaves, allowing for very large dimensions.** The maximum dimensions for a single-leaf door are: 216.5 cm (width) x 300 cm (height). Importantly, each design can be further enhanced with fixed (top and side) and/or movable (side) elements. Stylish glazing is also a frequent choice. Doors based on wooden slats subtly let light into the interior, offering a touch of coziness.

oak wood

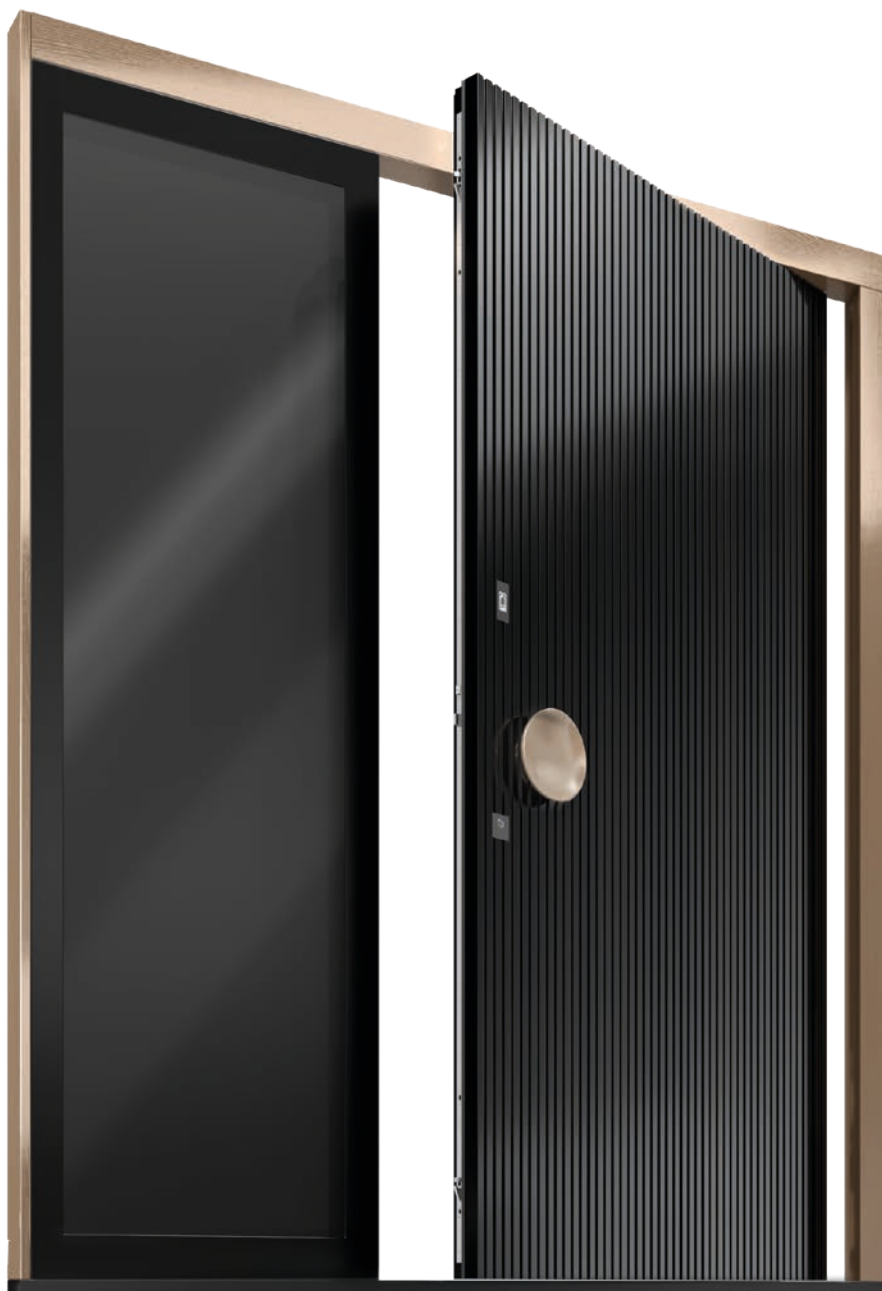

L-1

An innovative match of the GLASS model with spatial oak slats extended over a black varnished frame. The smooth surface of the wood finished with oil creates a perfect symbiosis with the smooth glass pane.

L-2

We bring out the beauty of wood while preserving its natural color. The GLASS model with horizontal slats and black highlights. The handrail is stylishly integrated into the glass pane.

L-3

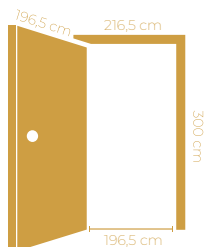

Model with GLASS side panel, which will attract all lovers of the iconic black. Vertical millwork, which, despite being coated with oil, still features visible ring patterns. The original handle bringing to mind a plate is in the same color as the casing.

PIVOT CLASSIC

Doors from the **PIVOT CLASSIC** collection are a dream come true for an elegant home in a traditional, timeless aesthetic. We trust in oak wood and carpentry. **Models in this line feature classic glazing and decorative strips**, thus imparting a chic character to the buildings. Despite the passage of years, the style in which we make door leaves is constantly the right choice, and the incredible durability of the wood guarantees high resistance to weather moods. PIVOT hinges, on which we mount the doors, are sturdily made and robust, which significantly increases the quality of the doors. The Pivot Classic line also means energy efficiency. **Doors installed with this type of hinge are as much as 10 cm thick**, which makes them ideal for passive buildings. Our classic models shine with a striking finish made with the utmost precision. For those who decide on designs from the Parmax collection, we stress every time how important a stage of selecting the right hardware is as well. Handles or rose windows with gold coating, or maybe the minimalist trend and traditional handles. Regardless of the choice, one thing is certain - the classics are always a good option.

oak wood

C-1

A nod to the classics. A new door model with a smooth finish without visible ring patterns. Wood covered with black varnish, which is extremely stylish in combination with the handle and rosette in the color of gold. The whole is complemented by side panels with sandblasted glass and a beautiful milled binding with inlays.

C-2

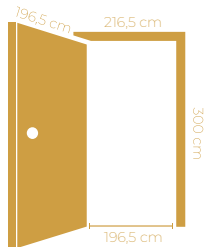

An original classic wrapped in opaque varnish, but not obscuring the natural ring patterns. Satin glass in the side panels adds subtlety to the whole structure, and decorative strips break the impeccability of the line.

PIVOT PLUS

The **Pivot Plus** line conceals the secret of masterful machining. **We subject wooden doors to precise milling.** This is our proprietary recipe for enhancing the beauty of wood and, at the same time, an extremely creative way to materialize the ideas of a door that will reflect the character and soul of a particular house. The main feature of the Pivot Plus line is classic elegance juxtaposed with the craftsmanship of joinery. **Mills are made on oak wood under a waterproof coating, taking care of every last detail.** Perfect work and contemporary design are our key to creating a prestigious showcase. **All doors in the PIVOT collection are mounted on hinges that have a door closer. It has a 0° and 90° stop position.** One of its major advantages is an extremely quiet system, i.e. soft close adjustment and hydraulic reverse control (wall protection). We pay attention to the highest possible quality of wood, so the door leaves are resistant to weather conditions. **Pivot Plus will be an excellent choice for those looking for unique designs and impeccable mill lines.**

100%
oak wood

P-1

Moments of fame for beamed oak. Veneered doors with black transitions created by machining. The pattern consisting of horizontal lines has also been transferred to the glass side panels. A handle imitating a plate has been combined with a smart door opening system, i.e. a fingerprint reader.

P-2

We coat the wooden door with varnish, and preserve the beautiful ring structures on the surface. We install the stylish C-shaped handrail with backlighting, which is not only an incredibly practical function, but also an aesthetic one. The spatial pattern used on the door is made with masterful milling.
